

Concept360 Venture LLC

Execution Intelligence for Regulated Fintech, Digital Assets & RWA

THE PROBLEM

Concept360 Venture LLC helps regulated fintech and digital asset organizations close the **Execution Gap** — the dangerous distance between regulatory approval, technology, and sustainable operational execution.

While many teams successfully navigate licensing, build products, and secure partnerships, they often struggle with fragmented ownership, unclear governance, weak escalation paths, and operational debt that surfaces after go-live.

We focus on turning regulatory permission into operational confidence.

WHAT WE DELIVER

01 Execution Gap Assessment Entry-point diagnostic across all 7 Operational Layers. Identifies where execution debt is accumulating and what requires immediate attention.	02 Operational Readiness Review Flagship. Full 7-layer diagnostic via stakeholder interviews and document review. Delivers a prioritized remediation roadmap.
03 Operational Readiness Implementation Hands-on execution of governance structures, operating models, vendor controls, and audit-ready documentation.	04 Fractional Governance & Delivery Leadership Embedded senior governance and execution oversight for regulated platforms post go-live. Scoped from Assessment findings.

HOW WE ENGAGE

Every engagement starts with an Assessment. What follows is defined by the findings — not by a pre-set package. **Nothing is proposed before Assessment findings are in.**

WHO WE HELP

CASP Licence Holders	Post-licensing operationalisation — turning regulatory approval into a functioning operating model.
RWA & Tokenization Platforms	Governance, vendor controls, and audit readiness as programmes scale toward institutional partners.
L1 Infrastructure Providers	Operational structure and governance frameworks required for institutional and regulatory conversations.
Regulated Fintechs	Execution oversight for programmes where compliance obligations have outgrown current governance capacity.

ABOUT

Biljana Obradović brings 20+ years of delivery discipline across regulated financial environments — from complex programme management to governance design and operational readiness in digital asset and RWA programmes.
